Video game of multiple players

"Multiplayer" redirects here. For other multiplayer games, see Game § Multiplayer

A multiplayer video game is a 1 video game in which more than one person can play in the same game environment at the same time, either 1 locally on the same computing system (couch co-op), on different computing systems via a local area network, or via a 1 wide area network, most commonly the Internet (e.g. World of Warcraft, Call of Duty, DayZ). Multiplayer games usually require players 1 to share a single game system or use networking technology to play together over a greater distance; players may compete 1 against one or more human contestants, work cooperatively with a human partner to achieve a common goal, or supervise other 1 players' activity. Due to multiplayer games allowing players to interact with other individuals, they provide an element of social communication 1 absent from single-player games.

History [edit]

Some of the earliest video games were two-player games, including early sports games (such 1 as 1958's Tennis For Two and 1972's Pong), early shooter games such as Spacewar! (1962)[1] and early racing video games 1 such as Astro Race (1973).[2] The first examples of multiplayer real-time games were developed on the PLATO system about 1973. 1 Multi-user games developed on this system included 1973's Empire and 1974's Spasim; the latter was an early first-person shooter. Other 1 early video games included turn-based multiplayer modes, popular in tabletop arcade machines. In such games, play is alternated at some 1 point (often after the loss of a life). All players' scores are often displayed onscreen so players can see their 1 relative standing. Danielle Bunten Berry created some of the first multiplayer video games, such as her debut, Wheeler Dealers (1978) 1 and her most notable work, M.U.L.E. (1983).

Gauntlet (1985) and Quartet (1986) introduced co-operative 4-player gaming to the arcades. The games 1 had broader consoles to allow for four sets of controls.

Networked [edit]

Ken Wasserman and Tim Stryker identified three factors 1 which make networked computer games appealing:[3]

Multiple humans competing with each other instead of a computer Incomplete information resulting in suspense 1 and risk-taking Real-time play requiring quick reaction

John G. Kemeny wrote in 1972 that software running on the Dartmouth Time Sharing 1 System (DTSS) had recently gained the ability to support multiple simultaneous users, and that games

were the first use of the functionality. DTSS's popular American football game, he said, now supported head-to-head play by two humans.[4]

The first large-scale serial sessions using a single computer[citation needed] were STAR (based on Star Trek), OCEAN (a battle using ships, submarines and helicopters, with players divided between two combating cities) and 1975's CAVE (based on Dungeons & Dragons), created by Christopher Caldwell (with artwork and suggestions by Roger Long and assembly coding by Robert Kenney) on the University of New Hampshire's DECsystem-1090. The university's computer system had hundreds of terminals, connected (via serial lines) through cluster PDP-11s for student, teacher, and staff access. The games had a program running on each terminal (for each player), sharing a segment of shared memory (known as the "high segment" in the OS TOPS-10). The games became popular, and the university often banned them because of their RAM use. STAR was based on 1974's single-user, turn-oriented BASIC program STAR, written by Michael O'Shaughnessy at UNH.

Wasserman and Stryker in 1980 described in BYTE how to network two Commodore PET computers with a cable. Their article includes a type-in, two-player Hangman, and describes the authors' more-sophisticated Flash Attack.[3] Digital Equipment Corporation distributed another multi-user version of Star Trek, Decwar, without real-time screen updating; it was widely distributed to universities with DECsystem-10s. In 1981 Cliff Zimmerman wrote an homage to Star Trek in MACRO-10 for DECsystem-10s and -20s using VT100-series graphics. "VTrek" pitted four Federation players against four Klingons in a three-dimensional universe.

Flight Simulator II, released in 1986 for the Atari ST and Commodore Amiga, allowed two players to connect via a modem or serial cable and fly together in a shared environment.

MIDI Maze, an early first-person shooter released in 1987 for the Atari ST, featured network multiplayer through a MIDI interface before Ethernet and Internet play became common. It is considered[by whom?] the first multiplayer 3D shooter on a mainstream system, and the first network multiplayer action-game (with support for up to 16 players). There followed ports to a number of platforms (including Game Boy and Super NES) in 1991 under the title Faceball 2000, making it one of the first handheld, multi-platform first-person shooters and an early console example of the genre.[5]

Networked multiplayer gaming modes are known as "netplay". The first popular video-game title with a Local Area Network(LAN) version, 1991's Spectre for the Apple Macintosh, featured AppleTalk support for up to eight players. Spectre's popularity was partially attributed[by whom?] to the display of a player's name above their cybertank. There followed 1993's Doom, whose first network version allowed four simultaneous players.[6]

Play-by-email multiplayer games use email to communicate between computers. Other turn-based variations not requiring players to be online simultaneously are Play-by-post gaming and Play-by-Internet. Some online games are "massively multiplayer", with many players participating simultaneously. Two massively multiplayer genres are MMORPG (such as World of Warcraft or EverQuest) and MMORTS.

First-person shooters have become popular multiplayer games; Battlefield 1942 and Counter-Strike have little (or no) single-player gameplay. Developer and gaming site OMGPOP's library included multiplayer Flash games for the casual player until it was shut down in 2013. Some networked multiplayer games, including MUDs and massively multiplayer online games (MMOs) such as RuneScape, omit a single-player mode. The largest MMO in 2008 was World of Warcraft, with over 10 million registered players worldwide. World of Warcraft would hit its peak at 12 million players two years later in 2010, and in 2024 earned the Guinness World Record for best selling MMO video game.[7] This category of games requires multiple machines to connect via the Internet; before the Internet became popular, MUDs were played on time-sharing computer systems and games like Doom were played on a LAN.

Beginning with the Sega NetLink in 1996, Game Boy in 1997 and Dreamcast in 2000, game consoles support network gaming over LANs and the Internet. Many mobile phones and handheld consoles also offer wireless gaming with Bluetooth (or similar) technology. By the early 2010s online gaming had become a mainstay of console platforms such as Xbox 360 and PlayStation.[citation

needed] During the 2010s, as the number of Internet users increased, two new video game genres rapidly gained worldwide popularity – multiplayer online battle arena and battle royale game, both designed exclusively for multiplayer gameplay over the Internet.

Over 1 time the number of people playing video games has increased. In 2024, the majority of households in the United States 1 have an occupant that plays video games, and 65% of gamers play multiplayer games with others either online or in 1 person.[8]

Local multiplayer [edit]

A LAN party

For some games, "multiplayer" implies that players are playing on the same gaming system 1 or network. This applies to all arcade games, but also to a number of console, and personal computer games too. 1 Local multiplayer games played on a singular system sometimes use split screen, so each player has an individual view of 1 the action (important in first-person shooters and in racing video games) Nearly all multiplayer modes on beat 'em up games 1 have a single-system option, but racing games have started to abandon split-screen in favor of a multiple-system, multiplayer mode. Turn-based 1 games such as chess also lend themselves to single system single screen and even to a single controller.

Multiple types of 1 games allow players to use local multiplayer. The term "local co-op" or "couch co-op" refers to local multiplayer games played 1 in a cooperative manner on the same system; these may use split-screen or some other display method. Another option is 1 hot-seat games. Hot-seat games are typically turn-based games with only one controller or input set – such as a single 1 keyboard/mouse on the system. Players rotate using the input device to perform their turn such that each is taking a 1 turn on the "hot-seat".

Not all local multiplayer games are played on the same console or personal computer. Some local multiplayer 1 games are played over a LAN. This involves multiple devices using one local network to play together. Networked multiplayer games 1 on LAN eliminate common problems faced when playing online such as lag and anonymity. Games played on a LAN network 1 are the focus of LAN parties. While local co-op and LAN parties still take place, there has been a decrease 1 in both due to an increasing number of players and games utilizing online multiplayer gaming.[9]

Online multiplayer [edit]

Online multiplayer 1 games connect players over a wide area network (a common example being the Internet). Unlike local multiplayer, players playing online 1 multiplayer are not restricted to the same local network. This allows players to interact with others from a much greater 1 distance. Playing multiplayer online offers the benefits of distance, but it also comes with its own unique challenges. Gamers refer to 1 latency using the term "ping", after a utility which measures round-trip network communication delays (by the use of ICMP packets). 1 A player on a DSL connection with a 50-ms ping can react faster than a modem user with a 350-ms 1 average latency. Other problems include packet loss and choke, which can prevent a player from "registering" their actions with a 1 server. In first-person shooters, this problem appears when bullets hit the enemy without damage. The player's connection is not the 1 only factor; some servers are slower than others.

Asymmetrical gameplay [edit]

Asymmetrical multiplayer is a type of gameplay in which 1 players can have significantly different roles or abilities from each other – enough to provide a significantly different experience of 1 the game.[10] In games with light asymmetry, the players share some of the same basic mechanics (such as movement and 1 death), yet have different roles in the game; this is a common feature of the multiplayer online battle arena (MOBA) 1 genre such as League of Legends and Dota 2, and in hero shooters such as Overwatch and Apex Legends. In 1 games with stronger elements of asymmetry, one player/team may have one gameplay experience (or be in softly asymmetric roles) while 1 the other player or team play in a drastically different way, with different mechanics, a different type of objective, or 1 both. Examples of games with strong asymmetry include Dead by Daylight, Evolve, and Left 4 Dead.[10]

Asynchronous multiplayer [edit]

Asynchronous 1 multiplayer is a form of multiplayer gameplay where players do not have to be playing at the same time.[11] This 1 form of multiplayer game has its origins in play-by-mail games, where players would send their moves through postal mail to 1 a game master, who then would compile and send out results for the next turn. Play-by-mail games transitioned to electronic 1 form as play-by-email games.[12] Similar games were developed for bulletin board systems, such as Trade Wars, where the turn structure 1 may not be as rigorous and allow players to take actions at any time in a persistence space alongside all 1 other players, a concept known as sporadic play.[13]

These types of asynchronous multiplayer games waned with the widespread availability of the 1 Internet which allowed players to play against each other simultaneously, but remains an option in many strategy-related games, such as 1 the Civilization series. Coordination of turns are subsequently managed by one computer or a centralized server. Further, many mobile games 1 are based on sporadic play and use social interactions with other players, lacking direct player versus player game modes but 1 allowing players to influence other players' games, coordinated through central game servers, another facet of asynchronous play.[13]

Online cheating [edit 1]

Online cheating (in gaming) usually refers to modifying the game experience to give one player an advantage over others, such 1 as using an "aimbot" – a program which automatically locks the player's crosshairs onto a target – in shooting games.[14][15][16] 1 This is also known as "hacking" or "glitching" ("glitching" refers to using a glitch, or a mistake in the code 1 of a game, whereas "hacking" is manipulating the code of a game). Cheating in video games is often done via 1 a third-party program that modifies the game's code at runtime to give one or more players an advantage. In other 1 situations, it is frequently done by changing the game's files to change the game's mechanics.[17]

Em termos de quantidade de cafeína, a Monster tem uma vantagem. Enquanto uma lata de Red
Bull contém 80mg de 8 cafeína, uma lata de Monster contém 160mg. Isso significa que a Monster
tem duas vezes mais cafeína do que a 8 Red Bull. Portanto, se o critério for a quantidade de
cafeína, a Monster é a vencedora.

No entanto, a força de 8 uma bebida energética não é apenas uma questão de quantidade de
cafeína. Outros ingredientes, como a taurina e a glicina, 8 também desempenham um papel
importante. Ambas as bebidas contêm esses ingredientes, mas em quantidades diferentes.
Além disso, a força de uma 8 bebida energética também pode ser influenciada pela forma como é
consumida. Por exemplo, algumas pessoas bebem Red Bull ou Monster 8 em combinação com
álcool, o que pode alterar seus efeitos.

Em resumo, é difícil dizer se a Red Bull ou a 8 Monster é mais forte, pois isso depende de vários
fatores, como a quantidade de cafeína, os outros ingredientes e a 8 forma como é consumida. Se
a quantidade de cafeína for o fator decisivo, então a Monster é a vencedora. No 8 entanto, se
considerarmos outros fatores, a coisa fica mais complicada e a resposta não é tão clara.

Estou num momento em bull slots que a minha vida está escapando das meus mãos Dani Oswaldo

O argentino contou que o quadro depressivo levou-o a vícios em bull slots álcool e drogas.

Oswaldo relatou, por vezes não consegue controlar impulsões autodestrutivos da acaba recorrendo à substâncias com contribuem para "desconstruir" a conexão entre as pessoas ao seu redor;

Vivo praticamente trancado em bull slots casa, não saio para nada. Não faço algo produtivo na minha vida! Não tenho vontade de sair da cama e nem de ir ao banheiro às vezes Dani Oswaldo Oswaldo lembrou o período como jogador e diz não entender porque ocorreu um processo que culminou na depressão. O ex-atleta ainda compartilhoU: corre risco de passar por dificuldades financeiras, já pois suas economias estão acabando para ele Não possui uma emprego fixo!

No passado eu fui um jogador de futebol de elite, e uma pessoa completamente diferente.: cheia em bull slots segurança da confiança! Hoje sou a pessoas que não reconheço Dani Oswaldo

O dinheiro não dura para sempre. Mas isso é o de menos, porque do recurso nunca me interessou! Eu nasci pobre e posso morrer pobres? Só que se dói foi quando estou empobrecendo na alma Dani Oswaldo

O ex-atleta disse que passa por tratamento psicológico para tentar reverter o quadro. Segundo ele próprio, a ideia de se abrir sobre da depressão e apesar de "muito difícil", surgiu como uma forma em bull slots incentivar pessoas com Atravessem situação parecida à buscarem ajuda!

Uma publicação compartilhada por Dani Stone (@danielosvaldobv)

Nascido em bull slots Buenos Aires, 'Dani' Oswaldo saiu cedo para o futebol italiano. O atacante revelado no Huracán partiu com a Atalanta aos 19 anos e foi 2005. Seu período de Bergamo é curto; mas ele obteve destaque No clube Itália:

Oswaldo atuou por Roma, Juventus. Inter de Milão – Bologna - Fiorentina e Lecce! Seu período mais artilheiro foi no clube da capital italiana: pelo qual fez 28 gols em bull slots 57 partidas durante 2011 a 2013. Longe dessa 'Terra na Bota' que Dani joguem outros três países europeus; Espanha (Espanyol), Inglaterra (Southampton) ou Portugal (Porto).
