Poker Dome Challenge Gameplay in the Poker Dome Also known as MANSIONPoker Poker Dome Challenge Country of origin United States No. of seasons 1 No. of episodes 43 Production Running time 2 hours Original release Network Fox Sports Net

The MANSIONPoker Poker Dome Challenge was a 43-week series of speed poker tournaments offering a grand prize of US\$1,000,000. The tournament aired in the United States on Fox Sports Network from May 2006 to March 2007. The tournament featured a number of technological gimmicks in an effort to increase viewer interest and excitement. Commentating duties were shared by rotating hosts including Barry Tompkins, Jon Kelley, Michael Konik, Michael Gracz, Joel Meyers and Chris Rose with Leeann Tweeden serving as co-host/exit interviewer (occasionally covered by Nafeesa DeFlorias). Matt Savage was the tournament director.

The series consisted of single table tournaments of six players each. Five of the six competitors qualified through daily freeroll tournaments held at mansionpoker. Another competitor came from the National Pub Poker League, an amateur poker league that partnered with MansionPoker and qualified its nightly bar tournament winners into a private weekly freeroll.[1][2] Winners of the online qualifiers were flown all expenses paid to Las Vegas, Nevada and received R\$500 in casino chips and other amenities.

Professional poker players Tony G, Dennis Waterman and Perry Friedman and reality television personality-turned poker pro Rob Mariano have appeared in the Dome. Nevada casino author Al W Moe appeared in the Dome and his wife, Shannon R Moe, was an alternate selection a month later.

Players started with 50,000 in tournament chips and play continued until one player had all 300,000. The tournament was single-elimination and only the winner of each table received prize money. Players had just 15 seconds to act on a hand before it was ruled dead. Each player was given one 30-second time extension that could be used at any time. When the table got to heads-up, each player received another 30-second time extension (although if a player hadn't previously used the extension he or she did not then have two). Betting was pot-limit pre-flop and no-limit post-flop until heads-up play, when it became all no-limit.

Each preliminary winner pocketed R\$25,000 in cash and advanced to the semi-finals. After each set of six preliminary tournaments, a semi-final single table tournament was played among the six winners, with the winner of that table taking R\$50,000 and advancing to the final table. After the six semi-final matches were played, the finalists played one more single table tournament for

the R\$1,000,000 winner-take-all grand prize. Each of the other finalists won a prize package from Mansion Poker worth R\$13,000.

The Poker Dome [edit]

Tournaments were played in front of a live audience in a structure called The Poker Dome. The audience couldn't be seen or heard by the players and players were screened before entering the Dome to ensure they were unable to communicate with anyone outside the Dome. The high tech table featured an LED display for the dealer button, hole card cameras, automatic card reading technology (described on-screen as "computer chips," possibly passive RFID tags) and built in LED hand timers. Two dealers worked the tournaments to maintain the fast pace, and players were attached to heart monitors. Players' hole cards and heart rates were displayed for the live audience and in particularly stressful situations like all in bets, heart rates were displayed to the home audience.

The Tropicana Resort & Casino hosted the first eight Round 1 preliminaries and the first Round 2 playoff prior to the completion of construction at the Neonopolis, where a top-floor movie theatre was reworked into the Poker Dome set. Eventual Poker Dome Challenge winner Rodel Tuazon won the first preliminary held in the Neonopolis studio, in an episode also featuring Tony G.

Tournament results [edit]

Final table [edit]

Finish	Player	Total cash	winnings
1	Rodel Tuazon	R\$1,075,000	
2	Dennis Waterman	R\$75,000	
3	Rob Sherwood	R\$75,000	
4	Ben Ludwig	R\$75,000	
5	Andrew Rogers	R\$75,000	
6	Jerry Schrader	R\$75,000	

World Pro-Am Challenge [edit]

On July 12, 2006, The Poker Dome played host to the World Pro-Am Challenge, with a US\$1,000,000 prize pool. Three professional players were pitted against three amateur online qualifiers, who had access to three other pros for coaching. The top three spots paid, and if an amateur cashed the prize money would be split with the coach. Each amateur started with R\$20,000 more in chips than the pros and each amateur/coach team was allowed two time outs, one called by the player and one by the coach.

Estilo de vida saludable puede contrarrestar el impacto de la genética en más de 60% y agregar cinco años más 0 a tu vida

Un estilo de vida saludable puede compensar el impacto de la genética en más de 60% y agregar entre cinco años más a tu vida, según el primer estudio de su tipo.

Está ampliamente aceptado que algunas personas tienen una o predisposición genética a una vida más corta. También se sabe que los factores de estilo de vida, específicamente el tabaquismo, o el consumo de alcohol, la dieta y la actividad física, pueden tener un impacto en la longevidad.

Sin embargo, hasta ahora no había una investigación para entender hasta qué punto un estilo de vida saludable puede atenuar los efectos de los genes que reducen la vida.

El rol clave de un estilo de vida saludable

Los hallazgos de varios estudios a largo plazo sugieren que un estilo de vida saludable podría compensar los efectos de los genes que reducen la vida en un 62% y agregar hasta cinco años a tu vida. Los resultados se publicaron en la revista BMJ Evidence-Based Medicine.

"Este estudio ilustra el papel clave de un estilo de vida saludable en atenuar el impacto de los factores genéticos en la reducción de la esperanza de vida", concluyeron los investigadores. "Las políticas de salud pública para mejorar los hábitos saludables servirían como potentes complementos a la atención médica convencional y mitigarían la influencia de los factores genéticos en la esperanza de vida humana".

El estudio involucró a 353,742 personas del UK Biobank y mostró que aquellas con un riesgo genético alto de una vida más corta tienen un riesgo aumentado en un 21% de muerte prematura en comparación con aquellas con un bajo riesgo genético, independientemente de su estilo de vida.

Mientras tanto, las personas con estilos de vida no saludables tienen un 78% de aumento en la probabilidad de muerte prematura, independientemente de su riesgo genético, encontraron investigadores de la Universidad de Medicina de la Escuela de Zhejiang en China y la Universidad de Edimburgo.

El estudio agregó que tener un estilo de vida no saludable y genes que reducen la vida más que duplicaron el riesgo de muerte prematura en comparación con las personas con mejores genes y estilos de vida saludables.

Sin embargo, los investigadores encontraron que las personas parecían tener un cierto grado de control sobre lo que sucedía. El riesgo genético de una vida más corta o muerte prematura puede ser compensado por un estilo de vida favorable en aproximadamente un 62%, encontraron.

Escribieron: "Los participantes con alto riesgo genético podrían prolongar aproximadamente 5,22 años de esperanza de vida a los 40 años con un estilo de vida favorable".

La combinación óptima de estilo de vida para una vida más larga

La "combinación óptima de estilo de vida" para una vida más larga se determinó como "nunca fumar, actividad física regular, duración adecuada de sueño y dieta saludable".

El estudio siguió a las personas durante un promedio de 13 años, durante los cuales ocurrieron 24,239 muertes. Las personas se clasificaron en tres categorías de esperanza de vida genéticamente determinada, incluidas las largas (20,1%), intermedias (60,1%) y cortas (19,8 %), y tres categorías de puntuación de estilo de vida, incluidas las favorables (23,1%), intermedias (55,6%) y desfavorables (21,3%).

Los investigadores utilizaron puntuaciones de riesgo genético para mirar múltiples variantes genéticas y llegar a la predisposición general de una persona a una vida más corta o más larga. Otras puntuaciones miraron si las personas fumaban, bebían alcohol, tomaban ejercicio, la forma del cuerpo, dieta saludable y sueño.

Matt Lambert, un funcionario superior de información de salud en el Fondo Mundial de Investigación del Cáncer, dijo: "Esta nueva investigación muestra que, a pesar de factores

genéticos, vivir un estilo de vida saludable, incluid una dieta equilibrada y nutritiva y 0 mantenerse activo, puede ayudarnos a vivir más tiempo".
